SKY CHOPPER (Flying Toy)

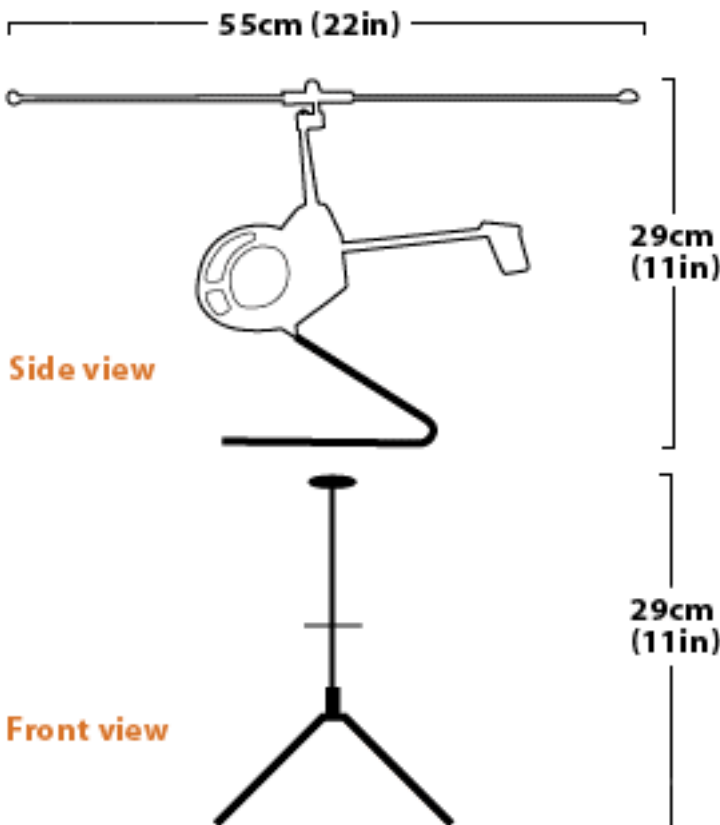

Flies and maneuvers like a real helicopter!

The Sky Chopper is easy to control. Revolutionary design features advanced aerodynamics that give you lift-off and continual flight with as little as a gentle 8 mph (13km/h) breeze.

Anyone can become a Sky Chopper pilot. In no time at all you'll become an expert, flying your Sky Chopper vertically, sideways, then bringing it down on a dime.

Engineered with super-lightweight, resilient, flexible polymer and lightweight metal, so you can even crash land and it will keep on flying.

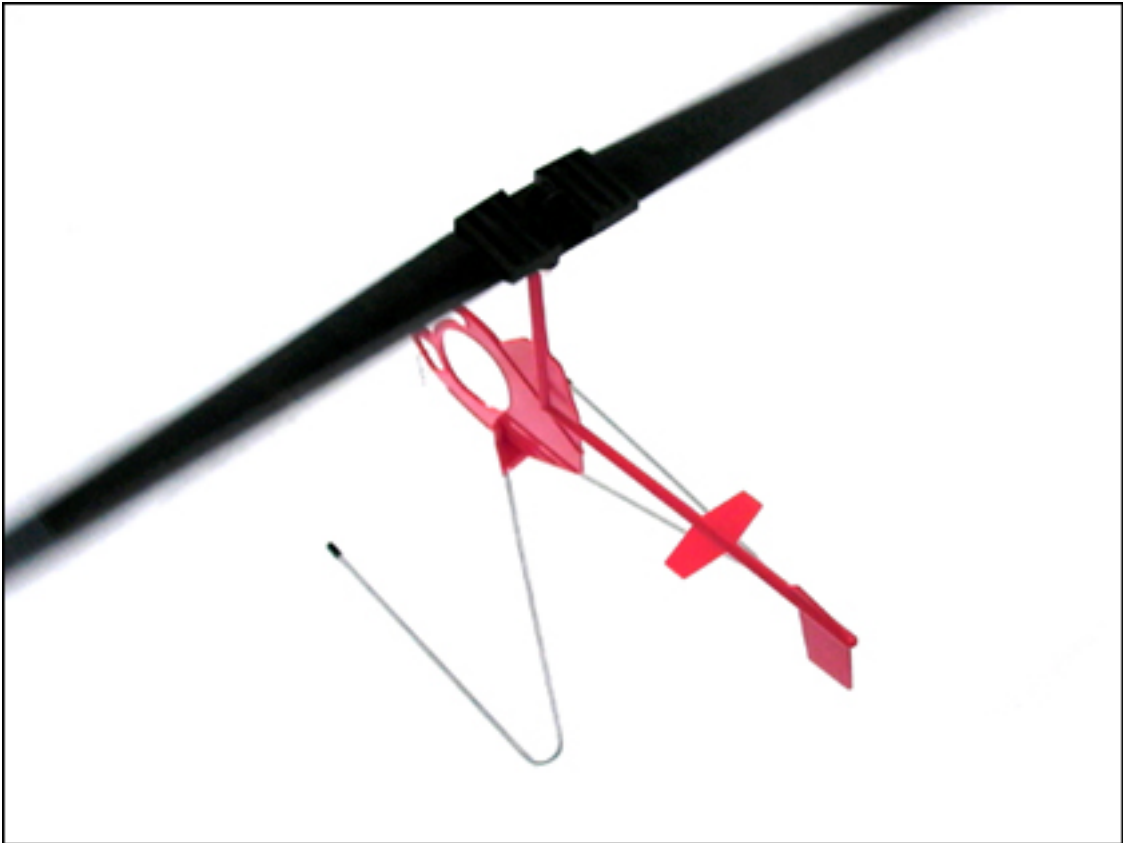

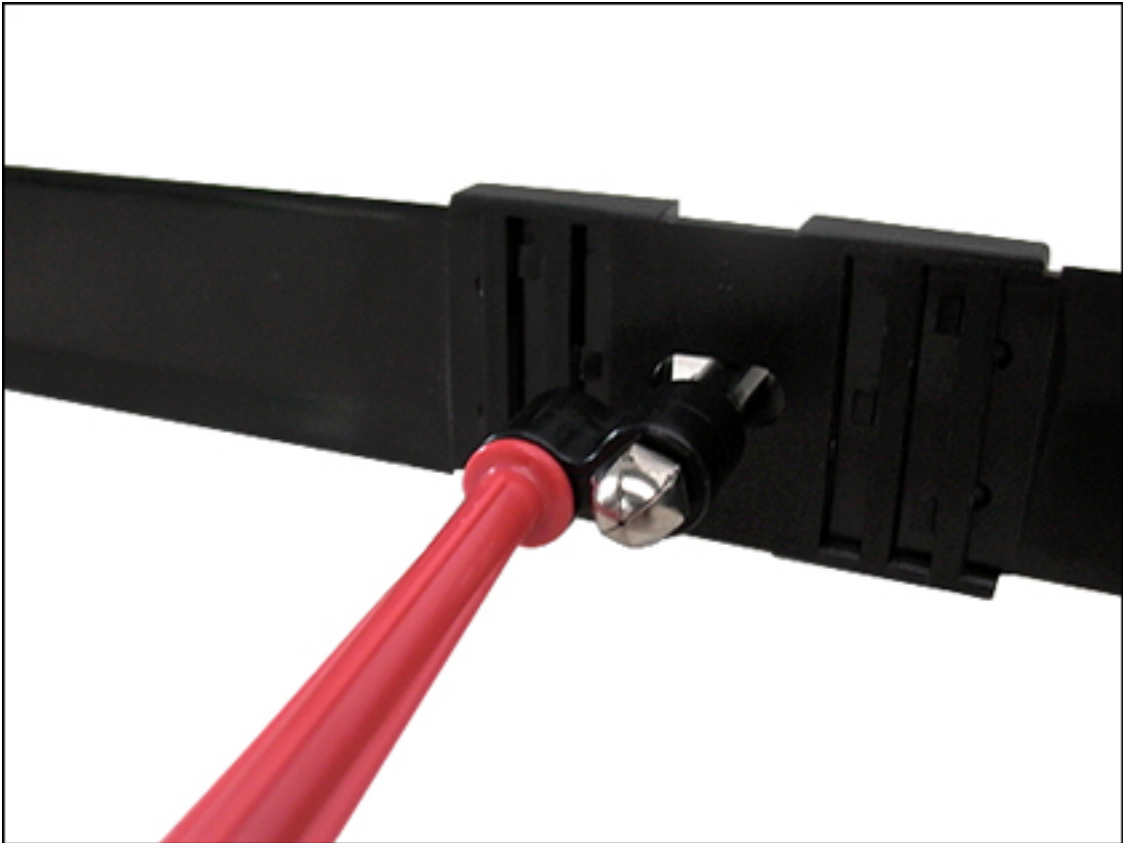

- Lifts off and lands vertically in as little as a 8 mph (13km/h) breeze.
- Hovers and moves in every direction.
- Climbs to over 100 feet (over 30 metres) without a motor, batteries, fuel, or rubber bands.
- Composed of resilient, flexible polymer and lightweight metal, so you can even crash land it and it will keep flying.
- Instructional guide shows you how to perform exciting stunts.
- As easy to control as an ordinary kite.
